

6th Annual Klickitat & White Salmon Rivers (Columbia Gorge) *Fisheries and Watershed Science Conference*

An underwater photograph of a Pacific Lamprey resting on a rocky riverbed. The lamprey is elongated and brownish, with a prominent blue eye. It is positioned horizontally across the frame, with its head towards the right. The riverbed is composed of various sized rocks and pebbles, some covered in green algae. The water is slightly murky, giving the scene a natural, somewhat dim appearance.

**Columbia River
Pacific Lamprey**

Regional Efforts and a **Call for Action**

The Lamprey Agenda

- Brief Summary of **Regional Activities**
- Introduction to the **Video**
- Mr. Sean Tackley (USACE)
discussing significant activities
on **mainstem dams**.
- Mr. Ralph Lampman (YN FRMP)
discussing initial efforts
towards lamprey **propagation**
and supplementation research.

Regional Lamprey Planning Library

- **USFWS** - Conservation Agreement (June, 2012)

Regional Lamprey Planning Efforts

- Draft Framework for Pacific Lamprey **Supplementation Research** in the Columbia River Basin (2013 – in development)

To Be Developed

- Regional Framework for Pacific Lamprey Research , Monitoring, Evaluation and Reporting in the Columbia River Basin (**RME Framework**)
- Pacific Lamprey Restoration and Supplementation Research – **Subbasin Strategies**

Without Further Ado Introducing:

Why Pacific Lamprey Matter to Columbia Basin Tribes

Narrated by four Columbia Basin tribal members.

- Documentation of the erosion, if not loss of a central component of a heritage.
- Listen, Learn and Help when and where you can!
